Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims **14** and **15** are rejected under 35 U.S.C. 102(b) as being anticipated by Sakai, US Patent 5,206,730.

Regarding claim **14**, Sakai discloses an image-capturing apparatus (Fig. 1) having a plurality of operation modes, comprising: control means (SSG fig. 1: 1) (SSG 1 controls the operation of the CCD sensor 2, A/D converter 3, frame memory 4, digital processing circuit 5, data compressing circuit 6 and memory 7 by generating the synchronization frequency said circuits) for controlling the operation of the entire image-capturing apparatus; and frequency changing means (Fig. 1: 14) for changing the operating frequency of the control means according to an operation mode being selected at the operation panel (Fig. 1: 13) (Col. 3, line 7 – col. 4, line 29).

Regarding claim **15**, Sakai discloses a control method for an image-capturing apparatus having a plurality of operation modes (serial shot photographing and one shot photographing), comprising: an operation-mode changing step (Col. 3, line 38 – col. 4, line 11) and a frequency changing step, of changing an operating frequency used for control of the image-capturing apparatus according to an operation-mode change (Col. 3, line 7 – col. 4, line 29).

***Allowable Subject Matter***

3. Claims 1-13 are allowed.

4. The following is a statement of reasons for the indication of allowable subject matter: the primary reason for indication of allowable subject matter is that the prior art fails to teach or reasonably suggest the limitations having a camera having a function for printing a captured image with the use of an external printing function wherein a clock generating means generates clocks having different operating frequencies for the control means, as between when the printing processing is executed and when the image-capturing means obtains an image.

Regarding claims 1, 4, 8, 9 and 12, Sakai, US Patent 5,206,730 discloses an image-capturing apparatus (Fig. 1) having a plurality of operation modes, comprising: control means (Fig. 1: 13) for controlling the operation of the entire image-capturing apparatus; and frequency changing means (Fig. 1: 14) for changing the operating frequency of the control means according to an operation mode (Col. 3, line 7 – col. 4, line 29). However, Sakai fails to teach or suggest the camera having a function for printing a captured image with the use of an external printing function wherein a clock generating means generates clocks having different operating frequencies for the control means, as between when the printing processing is executed and when the image-capturing means obtains an image.
